RAP/HRRR Suite: Hourly-Updating Forecast Models

RAP/HRRR Implementation History

NCEP Operational Implementations

01 May 2012

- **RAPv1:** Adoption of GSI, WRF-ARW and unified post
- Enabled use of community-developed software

25 Feb 2014

- **RAPv2:** Hybrid EnKF-3DVar data assimilation
- Significant improvement in upper-air forecasts

30 Sep 2014

- **HRRRv1:** 3-km Radar DA in WRF-ARW
- Significant improvement in convective forecasts

23 Aug 2016

- **RAPv3/HRRRv2 (a.k.a. RAPX/HRRRX):** Aerosol Thompson MP, improvements to MYNN PBL, RUC LSM, RRTMG Rad, Grell-Freitas cumulus
- Significant improvement in surface forecasts

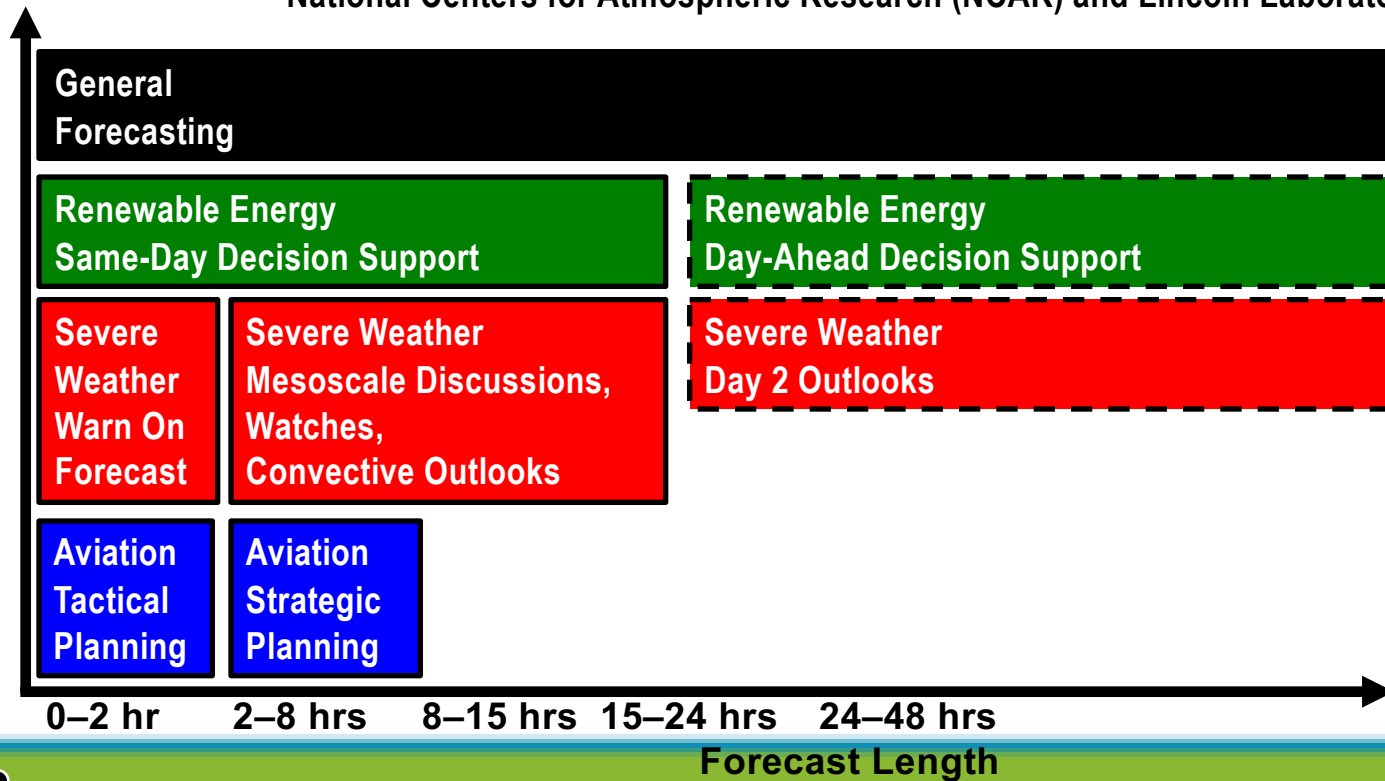

History of hourly updated NWP models at NOAA

Model and assimilation system	Horizontal grid spacing	Number of vertical levels	Assim. frequency	Implementation (month/year)		Geographical domain
				NCEP	ESRL

HRRR Users and Applications

Example: National Weather Service including Storm and Weather Prediction Centers (SPC & WPC)
Aviation Weather Center (AWC) and FAA Command Center
National Severe Storms Laboratory (NSSL) and Air Resources Laboratory (ARL)
National Centers for Atmospheric Research (NCAR) and Lincoln Laboratory (LL)

Operational RAPv2/HRRRv1 Forecast Biases

The RAP/HRRR has a daytime warm bias in the warm season.

The RAP/HRRR has a daytime dry bias in the warm season.

Experimental improvements to the model to remove bias have been made and will be implemented in RAPv3/HRRRv2.

Operational RAPv2/HRRRv1 Bias Conceptual Model

Led to occasional spurious high-based convective initiation in more weakly-forced diurnally-driven events

HRRRv2 Real-Time Case Study: Spring Radiation

Downward Shortwave Flux at Surface 12-hr Forecasts

HRRRv1 Real-Time 2014

Average excess of ~ 80-100 W/m²
incoming shortwave radiation

HRRRv2 Real-Time 2015

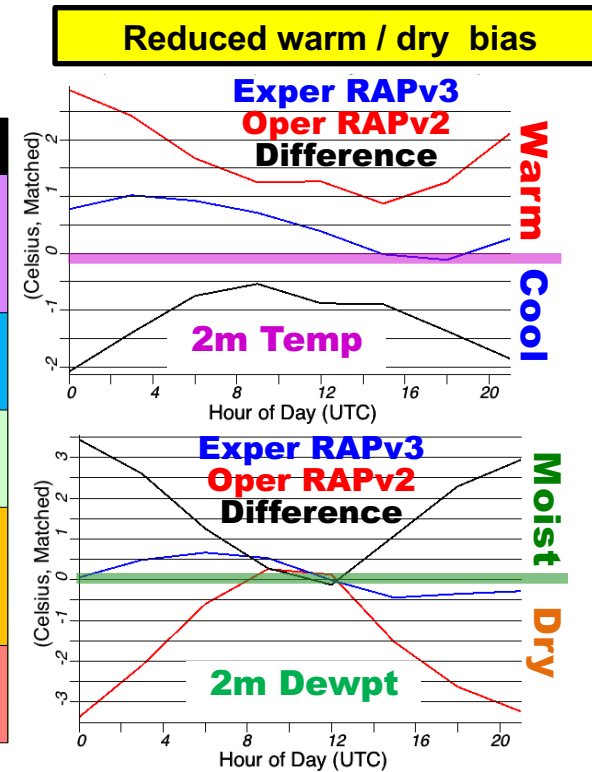

Much closer match to
observations

RAPv3/HRRRv2 Model Forecast Improvements

HRRR component improvements to address warm/dry bias in RAPV2/HRRRv3

Component	Mitigating Items
GSI Data Assimilation	Canopy water cycling Temp pseudo-innovations thru model boundary layer More consistent use of surface temp/dewpoint data
GFO Convective Parameterization	Shallow cumulus radiation attenuation Improved retention of stratification atop mixed layer
Thompson Microphysics	Aerosol awareness for resolved cloud production Attenuation of shortwave radiation
MYNN Boundary Layer	Mixing length parameter changed Thermal roughness in surface layer changed Coupling boundary layer clouds to RRTMG radiation
RUC Land Surface Model	Reduced wilting point for more transpiration Keep soil moisture in croplands above wilting point

RAPv3/HRRRv2 Changes at NCEP (Aug 2016)

	Model	Data Assimilation
<p>RAP (13 km)</p> <p>Most important for improvements to convection, cloud, warm/dry bias correction</p>	<p>WRF-ARWv3.6+ incl. physics changes</p> <p><u>Physics changes:</u></p> <p>Grell-Freitas-Olson convective scheme</p> <ul style="list-style-type: none"> - non-local mixing in shallow cumulus <p>Thompson MP -- Aerosol-aware</p> <p>MYNN PBL – subgrid-cloud rad feedback</p> <p>RUC LSM -- MODIS seasonal leaf-area index</p> <ul style="list-style-type: none"> -- Reduced wilting point, irrigation for cropland <p>RRTMG radiation scheme</p> <p>Direct and diffuse GHI components</p>	<p>Merge with GSI trunk</p> <p>Radial velocity assimilation</p> <p>Mesonet assimilation</p> <p>RARS data assimilation</p> <p>Radiance bias correction</p> <p>Pseudo-PBL obs for temperature</p> <p>Improved 2m temp/dewpoint background estimate, QC</p> <p>Low-reflectivity precip building</p> <p>Stronger ensemble weight in assimilation</p>
	<p>HRRR (3 km)</p>	<p>WRF-ARWv3.6+ incl. physics changes</p> <p><u>Physics changes:</u></p> <p>Thompson MP - Aerosol-aware</p> <p>MYNN PBL – subgrid-cloud rad effect</p> <p>RUC LSM -- MODIS seasonal leaf-area index</p> <ul style="list-style-type: none"> -- Reduced wilting point, irrigation for cropland <p>RRTMG radiation scheme</p> <p>Direct and diffuse GHI components</p> <p><u>Numerics changes:</u></p> <p>6th order slope-dependent diffusion</p>

RAPv3/HRRRv2 Changes to Observations Assimilated

New in RAPv3/HRRRv2

Radial Velocity (RAPv3)
 Lightning (RAPv3)
 Mesonet (RAPv3/HRRRv2)
 RARS Radiances (RAPv3)

Hourly Observation Type	Variables Observed	Observation Count
Rawinsonde	Temperature, Humidity, Wind, Pressure	120
Profiler – 915 MHz	Wind, Virtual Temperature	20-30
Radar – VAD	Wind	125
Radar	Radial Velocity	125 radars
Radar reflectivity – CONUS	3-d refl → Rain, Snow, Graupel	1,500,000
Lightning	(proxy reflectivity)	NLDN
Aircraft	Wind, Temperature	2,000 -15,000
Aircraft - WVSS	Humidity	0 - 800
Surface/METAR	Temperature, Moisture, Wind, Pressure, Clouds, Visibility, Weather	2200 - 2500
Surface/Mesonet	Temperature, Moisture, Wind	~5K-12K
Buoys/ships	Wind, Pressure	200 - 400
GOES AMVs	Wind	2000 - 4000
AMSU/HIRS/MHS (RARS)	Radiances	1K-10K
GOES	Radiances	large
GOES cloud-top press/temp	Cloud Top Height	100,000
GPS – Precipitable water	Humidity	260
WindSat Scatterometer	Winds	2,000 – 10,000

RAPv3/HRRRv2 Summary of Changes – Model / Assim

Implementation RAPv3/HRRRv2

Larger RAP domain

Newer WRF version

More ensemble weight,
more complete use of
radar reflect. all seasons

Advanced physics

Seasonal Vegetation
Fraction/Leaf Area Index

Model	Run at:	Domain	Grid Points	Grid Spacing	Vertical Levels	Pressure Top	Boundary Conditions	Initialized
RAP	GSD, NCO	North America	953 x 834	13 km	50	10 mb	GFS	Hourly (cycled)
HRRR	GSD, NCO	CONUS	1799 x 1059	3 km	50	20 mb	RAP	Hourly (pre-forecast hour cycle)

Model	Version	Assimilation	Radar DA	Radiation LW/SW	Microphysics	Cumulus Param	PBL	LSM
RAP	WRF-ARW v3.6+	GSI Hybrid Ensemble to 0.75	13-km DFI + low reflect	RRTMG/RRTMG	Thompson Aerosol v3.6	GF + Shallow	MYNN v3.6	RUC v3.6
HRRR	WRF-ARW v3.6+	GSI Hybrid Ensemble to 0.75	3-km 15-min LH + low reflect	RRTMG/RRTMG	Thompson Aerosol v3.6	MYNN sub-grid clouds for radiation	MYNN v3.6	RUC v3.6

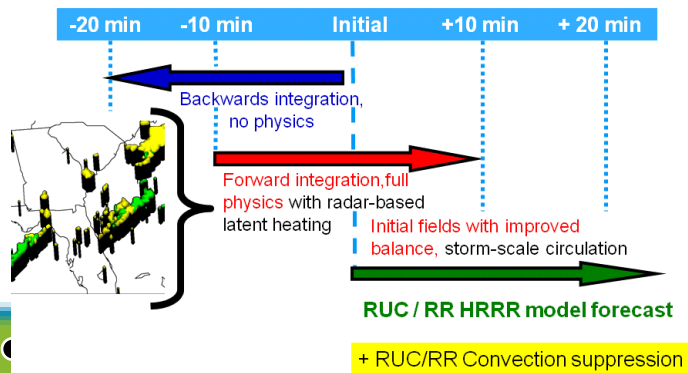

Model	Horiz/Vert Advection	Scalar Advection	Upper-Level Damping	6 th Order Diffusion	SW Radiation Update	Land Use	MP Tend Limit	Time-Step
RAP	5 th /5 th	Positive-Definite	w-Rayleigh 0.2	Yes 0.12	20 min	MODIS Seasonal	0.01 K/s	60 s
HRRR	5 th /5 th	Positive-Definite	w-Rayleigh 0.2	Yes 0.25 (flat terr)	15 min with SW-dt	MODIS Seasonal	0.07 K/s	20 s

Rapid Refresh Specific Analysis Features

Cloud and hydrometeor analysis

Digital filter-based reflectivity assimilation (DDFI)

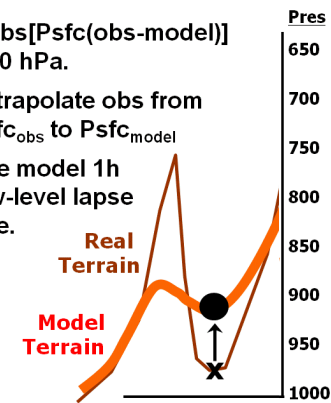

Special treatments for surface observations

Elevation correction

If $\text{abs}[\text{Psf}(\text{obs}-\text{model})] < 70 \text{ hPa}$.

Extrapolate obs from Psf_{obs} to $\text{Psf}_{\text{model}}$

Use model 1h low-level lapse rate.

PBL-based pseudo-observations

Updates to RUC Land Surface Model

RAP improvements

Version 2

Increased number of levels in soil domain – **9 levels**

OLD	NEW
~ 8 m	~ 8 m
0 (cm)	0 (cm)
	1
	4
5	10
20	30
40	60
	100
160	160
300	300

- Increased roughness Z_0 for forests, cropland, urban
- New formulation to compute **effective roughness length Z_{0eff}** in the grid box (exponential)

Version 3 (partial list)

- **Seasonal variations of Z_0** for MODIS cropland category
- **Seasonal variations of LAI** based on the current vegetation fraction and variability of this parameter for different vegetation types

Thinner soil layer in energy / moisture budgets
Potential for increased near-surface diurnal cycle
Reduced warm bias at night, cold bias in day

What is unique about the Land Surface Model (LSM) for HRRR/RAP?

- 9 soil layers, 2 snow layers
- Surface observations are used to update the LSM through the data assimilation step. For example, the soil temperature is decreased and soil moisture is increased where the model is too warm and too dry compared to the surface observations.

Example Soil Adjustments

20 UTC

03 June 2013

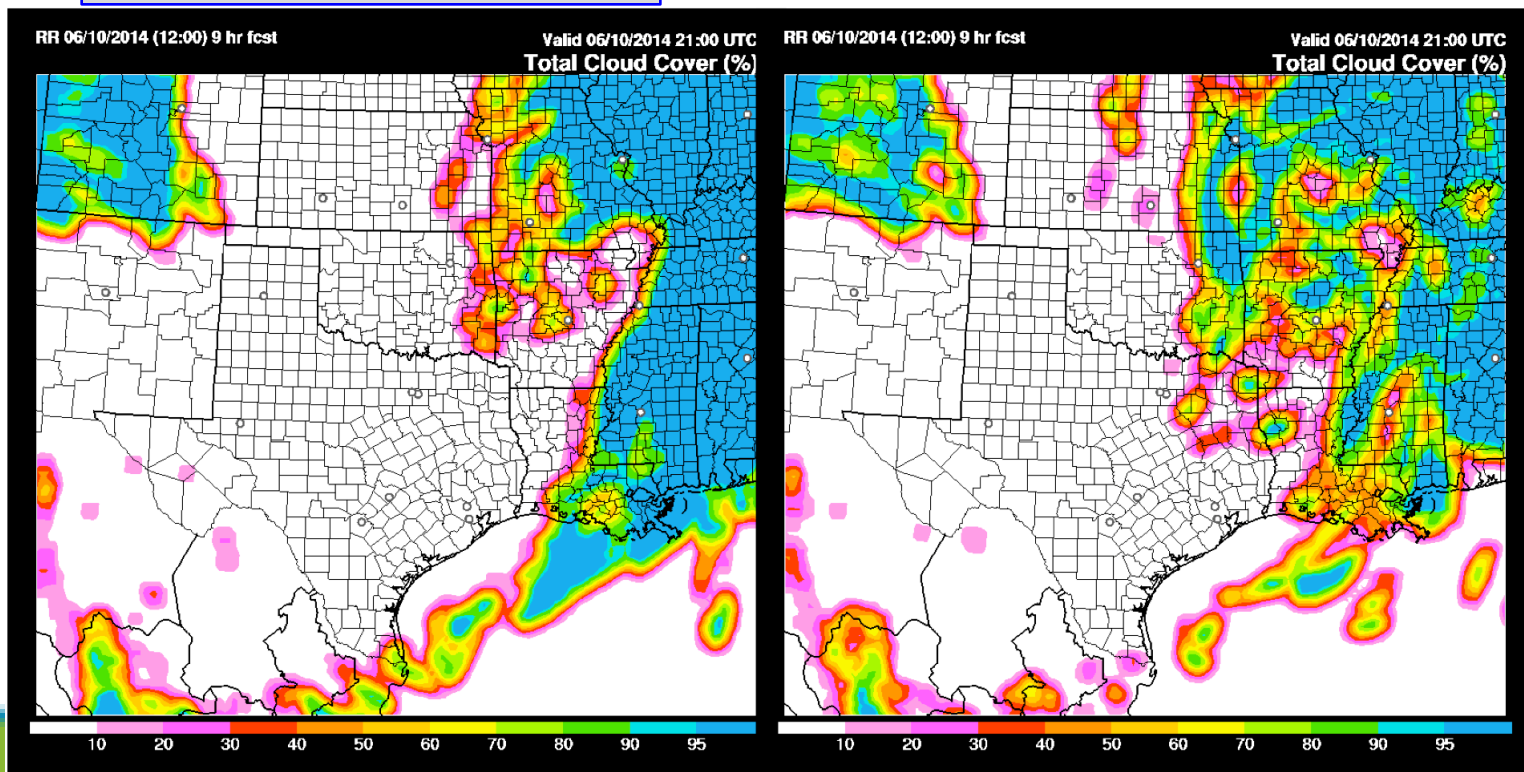

NCEP RAPv3/HRRRv2-2015 Changes

Use of forecast aerosol fields to have prognostic cloud-condensation nuclei (CCN).

Example: RAP cold-start tests without/with aerosol-aware cloud microphysics

WRFv3.6 Aerosol-aware

What about snow cover?

The snow water equivalent is cycled. So, model frozen precipitation is remembered.

The Interactive Multisensor Snow/Ice Mapping System (IMS) is used to update the snow cover in the model when it is available (once a day).

IMS Surface Snow Water Equivalent
Valid 0000 UTC

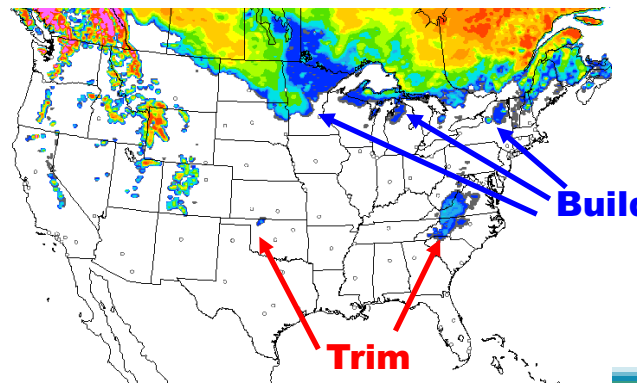

Model Surface Snow Water Equivalent
Valid 0000 UTC

Before NOAA IMS snowcover update

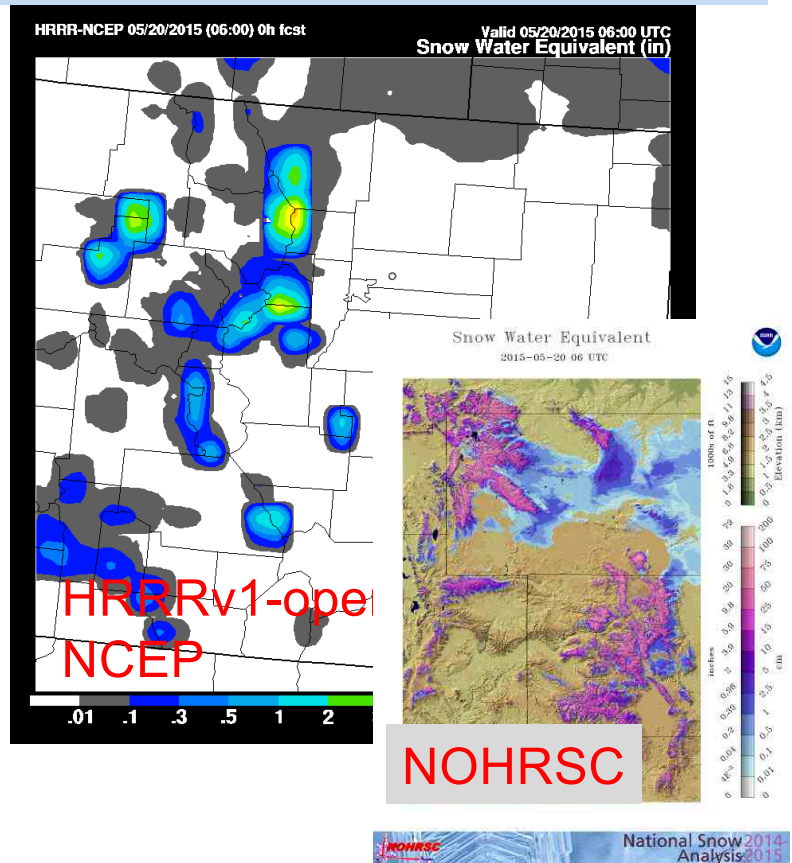

After NOAA IMS snowcover update

Snow-cover updating HRRRv2 – full land-sfc/snow cycling

RAPv3/HRRRv2: New Model Forecast Fields

Highlights:

- 3-D
 - Rain, cloud water and cloud ice number concentration
 - Ice-friendly and water-friendly aerosol number concentration
 - Cloud fraction (includes sub-grid scale cloud contributions)
- 2-D
 - Downward direct-normal incident shortwave radiation flux
 - Downward diffuse shortwave radiation flux
- Separate graupel and snow-water equivalent accumulations
- Run-total accumulated snow depth with variable-density microphysical contributions (no 10:1 assumption)
 - Deeper snow accumulations in colder regions
 - Shallower snow accumulations in warmer regions

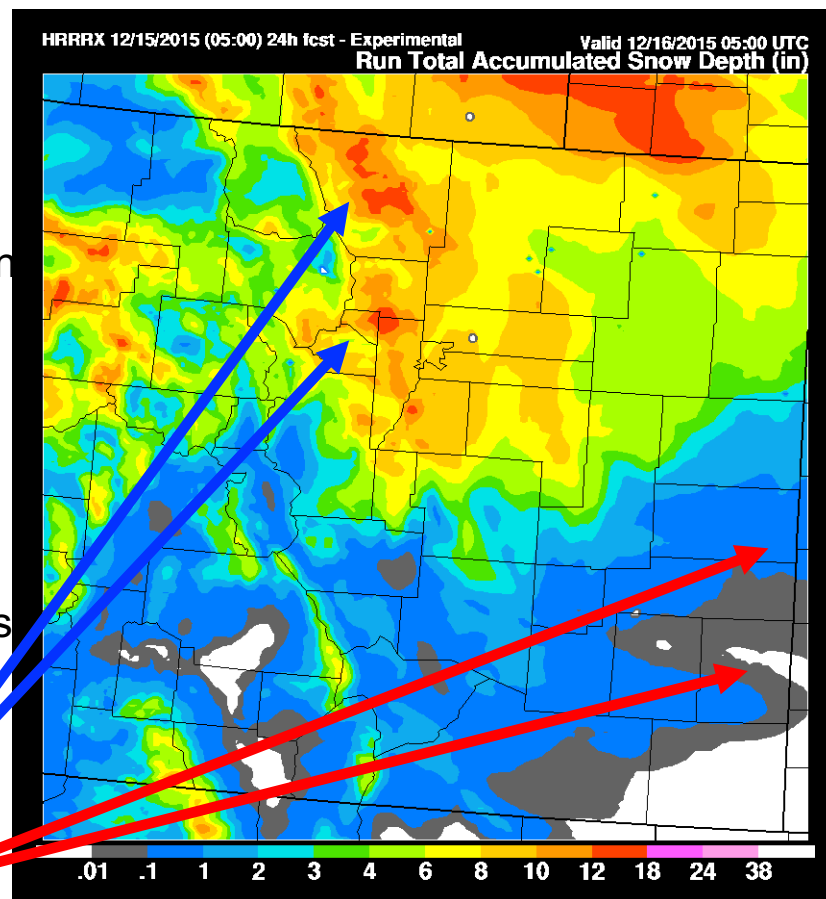

RAPv3/HRRRv2: New Model Forecast Fields

Highlights:

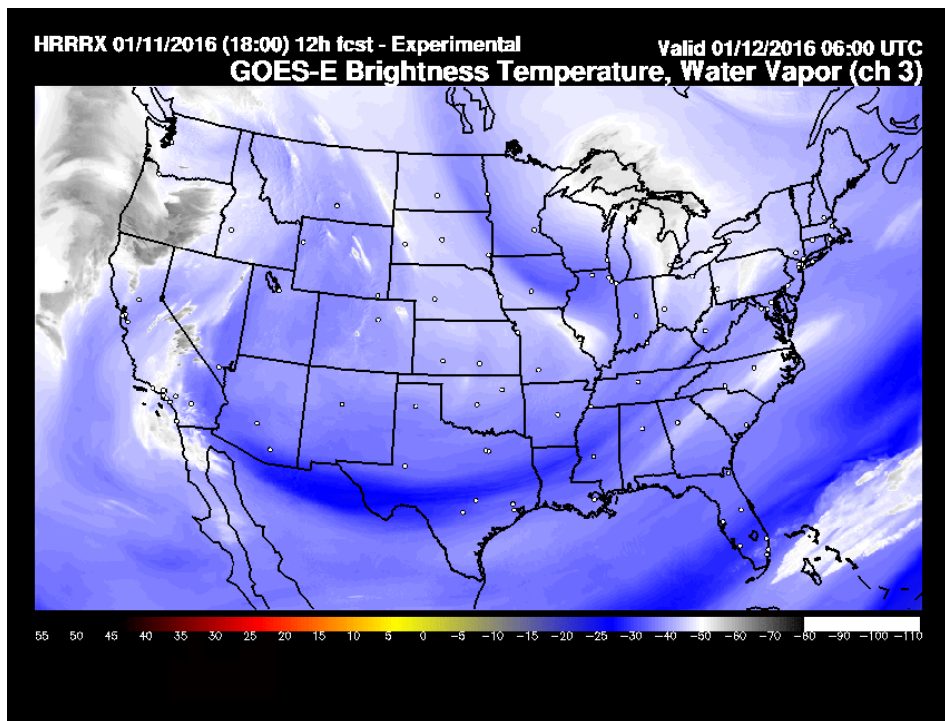

- 3-D
 - Rain, cloud water and cloud ice number concentration
 - Ice-friendly and water-friendly aerosol number concentration
 - Cloud fraction (includes sub-grid scale cloud contributions)
- 2-D
 - Downward direct-normal incident shortwave radiation flux
 - Downward diffuse shortwave radiation flux
 - Separate graupel and snow-water equivalent accumulations
 - Run-total accumulated snow depth with variable-density microphysical contributions (no 10:1 assumption)
 - Deeper snow accumulations in colder regions
 - Shallower snow accumulations in warmer regions

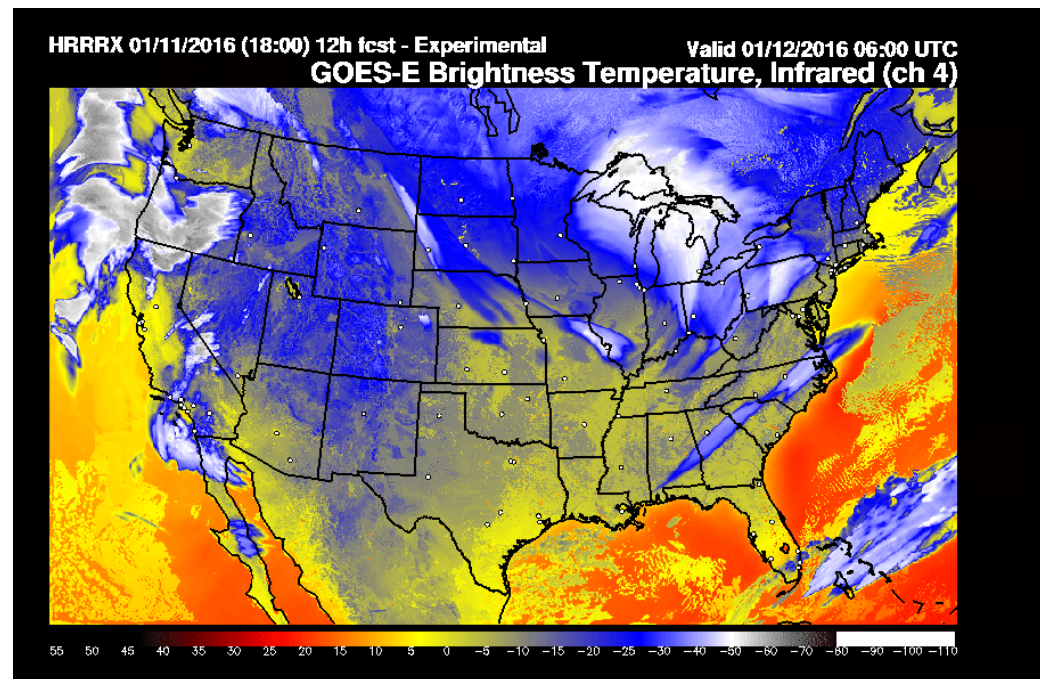

RAPv3/HRRRv2: New Model Forecast Fields

HRRRv2: Simulated Satellite Imagery (GOES-East and GOES-West)

Water Vapor

Infrared

RAPv3/HRRRv2: Precip Type Diagnostic

- Starts by computing snow fraction =
 - ❖ Fallen snow in past hour/(total snow + rain over past hour)
- Determine potential for S/R/ZR based on:
 - ❖ Fall rates for rain and snow
 - ❖ Amount of rain and snow over previous hour
 - ❖ 2m Temp
- Also check fall rate for graupel to determine potential for IP based on:
 - ❖ Fall rates for rain and snow
 - ❖ Max rain mixing ratio
 - ❖ 2m Temp

Can overlap one or more types (not exclusive)

RAPv3/HRRRv2: Forecast Performance Summary

RAPv3/HRRRv2 Enhancements

Operational Upgrade: Scheduled 23 Aug 2016

- **Winds -- Consistent RAPv3 improvement for both upper-air and surface, for all seasons**
- **Temperature – Reduced low-level warm bias for warm season afternoon / evening. Improved upper-level temperature forecasts**
- **Moisture – Reduced low-level dry bias for warm season afternoon / evening. Improved upper-level relative humidity forecast**
- **Precipitation – Slight improvement, reduced low thresh high bias / increased high thresh low bias, more accurate synoptic feature placement**
- **Convection – HRRRv2 reduces spurious convection in capped warm-sectors, permits more accurate convective evolutions**

RAPv4/HRRRv3 ESRL Development – (ESRL 39/36 hr Runs)

	Model	Data Assimilation
RAPv4 (13 km)	<p>WRF-ARW v3.8+ incl. physics changes</p> <p><u>Physics changes:</u> Thompson microphysics – improved upper-level clouds MYNN PBL update – better sub-grid clouds, meso env LSM update – 15” MODIS data – better lower boundary VIIRS-based real-time greenness vegetation fraction</p> <p><u>Numerics changes:</u> Improved terrain (cell avg) – better winds /turbulence Hybrid vertical coordinate from NCAR (upcoming)</p>	<p>Merge with GSI trunk – last updated in Jan 2016</p> <p><u>New Observations for assimilation:</u> NCEP new VAD wind retrievals Add AMVs over land and TAMDAR GOES-R lightning mapper – convection proxy</p> <p><u>Assimilation Methods:</u> Revised PBL pseudo-obs – reduce RH bias More ensemble weight in hybrid DA (0.9/0.1) METAR and GOES cloud building now consistent Aircraft temperature bias correction</p>
